FieldVu FV2008 Release Highlights

Date: August 17, 2020

This general release to FieldVu Cloud and FieldVu Mobile focuses on new functionality in the areas of supporting Multiple Company implementations using SAP Business ByDesign since release FV2006 in June 2020.

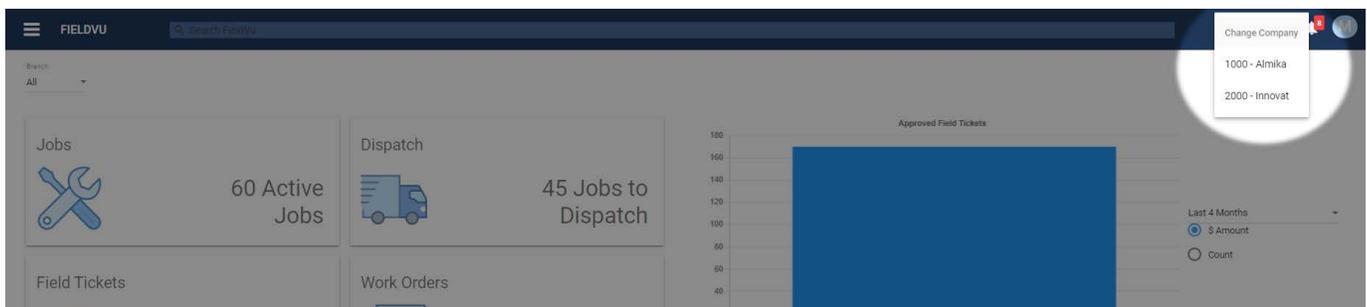

The next release is FV2010, scheduled for October 2020.

Multi-Company Support

Field Service and Rental companies often have multiple legal entities each requiring specific FieldVu functionality. With this release, FieldVu will now handle multiple companies operating in the same SAP Business ByDesign instance. This is an extensive change to FieldVu and affects many screens, however the experience is seamless and supports users with responsibilities in many companies, including Field Workers.

FieldVu Cloud

Users in FieldVu Cloud now have a selector in the top right corner across most screens for managing which company they are working within. The data within the screens adjusts depending on which company context you are currently working within.

Release Highlights

FieldVu Mobile

When a user exists at multiple companies, FieldVu mobile will provide them with an option to choose which company they want to work within for that login session. Although this is rare for Field Workers, it is important for back-office users who need to periodically make corrections to Field Tickets and Work Orders prior to invoicing.
